

ULI101: INTRODUCTION TO UNIX / LINUX AND THE INTERNET

WEEK 2: LESSON 2

MANAGING TEXT FILES:
USING TEXT EDITORS TO CREATE & EDIT A TEXT FILE
MANAGING TEXT FILE CONTENT

PHOTOS AND ICONS USED IN THIS SLIDE SHOW ARE LICENSED UNDER [CC BY-SA](#)

LESSON 2 TOPICS

Creating Text Files

- Purpose of a Text Editor
- Using the `nano` Text Editor / Demonstration
- Using the `vi` Text Editor / Demonstration

Managing / Manipulating Text Files

- Linux Commands: `touch`, `cat`, `more/less`, `cp`, `mv`, `rm`, `diff`, `file`, `find`
- Demonstration

Homework

- Perform **Tutorial 2: Unix / Linux File Management (Investigation 2)**
Perform LINUX PRACTICE QUESTIONS (9 – 16)

CREATING TEXT FILES

Text Editors

A **Text Editor** allows users to **create, modify** and **save** editing changes of text files.

Although **programming students** can use **graphical IDE's** to code and compile programs, students can **create source code** using a text editor and **compile their source code** in their Matrix account to generate **executable programs**.

```
#include <stdio.h>
#include <stdlib.h>
#include <sys/types.h>
#include <arpa/inet.h>

void serveur1(portServ ports)
{
    int sockServ1, sockServ2, sockClient;
    struct sockaddr_in monAddr, addrClient, addrServ2;
    socklen_t lenAddrClient;

    if ((sockServ1 = socket(AF_INET, SOCK_STREAM, 0)) == -1) {
        perror("Erreur socket");
        exit(1);
    }
    if ((sockServ2 = socket(AF_INET, SOCK_STREAM, 0)) == -1) {
        perror("Erreur socket");
        exit(1);
    }

    bzero(&monAddr, sizeof(monAddr));
    monAddr.sin_family = AF_INET;
    monAddr.sin_port = htons(ports.port1);
    monAddr.sin_addr.s_addr = INADDR_ANY;
    bzero(&addrServ2, sizeof(addrServ2));
```

CREATING TEXT FILES

Text Editors

Networking and Tech Support students use a text editor to **edit configuration files.**

Throughout their program, students will become familiar with the process of **installing, configuring, and running** network services on their Linux servers.

Text editors are an important tools to help setup but also **"tweak"** or **make periodic changes in networking services configuration.**

```
# .bashrc

# Source global definitions
if [ -f /etc/bashrc ]; then
    . /etc/bashrc
fi

# Uncomment the following line if you don't like systemctl's auto-paging feature:
# export SYSTEMD_PAGER=

# User specific aliases and functions
PS1="\e[0;36m[\u @ \h \W] \e[m "
PS2="/Finish command/ "
export LC_ALL=C
export LC_COLLATE=C
who
echo
mesg n
PATH=$PATH:~/scripts

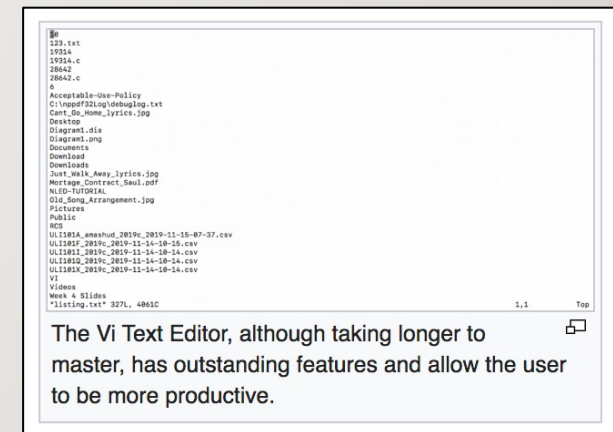

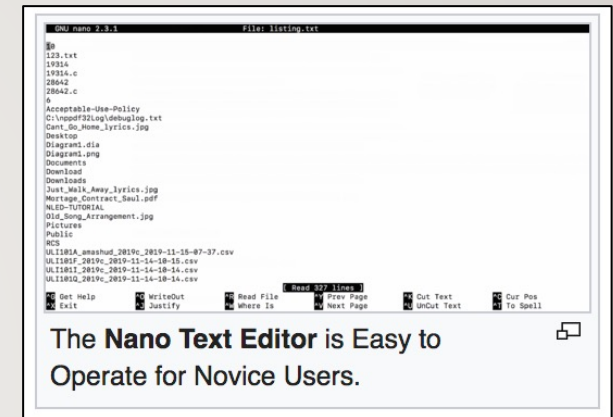

umask 077
```

CREATING TEXT FILES

Text Editors

Regardless of the IT stream that they are in, it is useful for students to **expose themselves to different text editors and then use one that they feel most comfortable working with.**

The two most readily-available command line text editors in Linux are **nano** and **vi**.

CREATING TEXT FILES

Nano Text Editor

The **nano** text editor is considered to be an easy-to-use text editor. When using the nano text editor, you are placed in **INPUT** mode, to enter text immediately.

Nano editing **commands** typically consist of the **^** symbol which represents the **<ctrl>** key followed by a character.

NOTE: There is no **undo** command in Nano!

The table on the right list a few Nano commands and their purpose. Refer to **week 2 notes** for a **nano reference sheet**.

NOTE: In the Nano reference sheet, the letter **M** represents the **<esc>** key

```
GNU nano 2.3.1      File: mytext.txt
This is the first line
This is the second line
This is the third line
```

Key Combination	Purpose
<ctrl><space> , <esc><space>	Move forward / backward one word
<ctrl>a , <ctrl>e	Move to beginning / end of line
<ctrl>k	Cut line
<esc>6	Copy Line
<ctrl>u	Paste Cut / Copied Text
<ctrl>g	Display help screen
<ctrl>x	Save and exit editing session

MANAGING DIRECTORIES

Instructor Demonstration

Your instructor will demonstrate how to create and edit a text file using the nano text editor.

ESC: can release after one press

Alt: need to hold when pressing another key

more

CREATING TEXT FILES

much powerful than nano

vi Text Editor ~:the current line doesn't exist

The **vi (vim)** text editor (although taking longer to learn) has outstanding features to increase coding productivity.

The major different between nano and vi is that **vi starts in COMMAND LINE mode**. You need to issue letter commands to perform text editing or press colon “:” to enter last line mode to issue more complex commands.

To make it easier to learn how to use this text editor, an **online tutorial** was created (two decades ago) to provide you "hands-on" experience in command editing techniques.

To run this tutorial, issue the following command in Matrix:
/home/jason.carman/vi-tutorial [vimtutor](#)

You can refer to your **week 2 notes** for a **vi command reference sheet**.

```
This is the first line
This is the second line
This is the third line
~
~
~
~
~
~
~
~
```

Key Combination	Purpose
i	Enter INSERT mode
<esc>	Return to COMMAND mode
B , W	Move forward / backward one word
0 , \$	Move to beginning / end of line
dd	Cut line
yy	Copy Line
p , P	Paste below / above line
:help	Display help screen
:x	Save and exit editing session

MANAGING DIRECTORIES

Instructor Demonstration

Your instructor will demonstrate how to create and edit a text file using the **vi** text editor.

- i: insert before current letter
- a: insert after current letter
- o: create new line after the current line
- O: create new line before the current line
- yy: yank the entire line
- dd: delete the entire line
- dw: delete word
- B: skip comma
- b:

- h replace arrow key
- j: up
- k
- l: down

MANAGING TEXT FILES

Purpose

It is **essential** for students in this course not only to create text files but also to learn how to **manage** text files.

Students need to learn how to **create** empty files, **copy** files for backup purposes, **move** or **rename** incorrectly spelled filenames, **edit** files as well as **view** text file contents without the danger of editing or corrupting those files.

Students also need to learn how to **remove** files, check for **differences** between a couple of files as well as **obtain information** regarding the status of a file and information regarding the file's content.

MANAGING TEXT FILES

Text File Management Commands

Here are common text file management commands:

Linux Command	Purpose
<code>touch</code>	Create empty file(s) / Updates Existing File's Date/Time Stamp
<code>cat</code>	Display text file's contents without editing (small files)
<code>more</code> , <code>less</code>	Display / Navigate within large text files without editing
<code>head</code> , <code>tail</code>	View lines at top/bottom of file :g/keyword/p
<code>grep</code>	Display lines in file that match a pattern grep keyword fileName: filter lines has that keyword in the file
<code>cp</code>	Copy text file(s)
<code>mv</code>	Move / Rename text files
<code>rm</code>	Remove text file(s)
<code>diff</code>	Displays differences between 2 files

MANAGING TEXT FILES

Text File Management Commands

Here are some **additional** text file management commands:

Linux Command	Purpose
<code>sort</code>	Display contents of file in sorted order
<code>uniq</code>	Display identical adjacent lines only once
<code>file</code>	Gives info about the contents of the file (e.g. file with no extension)
<code>find</code>	<p>To find files matching specified characteristics:</p> <pre>find . -name "file*" lists pathname of any filenames beginning with "file", from the current directory and any subdirectories find . -size +50k lists pathname of any files larger than 50 kb, from the current directory and any subdirectories find . -mmin -5 lists files modified less than 5 minutes ago</pre>

MANAGING DIRECTORIES

Managing Manipulating Text Files

Your instructor will demonstrate how to **manage / manipulate** text files:

- Create empty files
- View small and large text files
- Sort files
- Display matched pattern file content
- Remove duplicate lines
- Compare files for differences
- Obtain file information / List file pathnames

HOMEWORK

Getting Practice

Perform the online tutorial **Tutorial2: Unix / Linux File Management**

(Due: Friday Week 3 @ midnight for a 2% grade):

- [INVESTIGATION 2: MANAGING TEXT FILES](#)
- [LINUX PRACTICE QUESTIONS](#) (Questions 9 – 16)
